

Introduction

Debugging helps you identify and remove unwanted behavior and errors from your workflows. Debugging is a staple of software development and in this module we will cover the tools you have at your disposal when tackling problems in your code. In the first part of the session we will take a look at the Debug tab and the features available and we will continue with understanding some of the more common errors and how to solve them. In the last part of this module we will take a look at the TryCatch Activity.

Requirements:

Previous modules should be completed.

Things you will learn:

- How to use the debug features
- How to sync with applications using Find Element or Element Exists
- How TryCatch Activity works and how to use it
